

The world's oldest resource  
is the heart of the modern office.

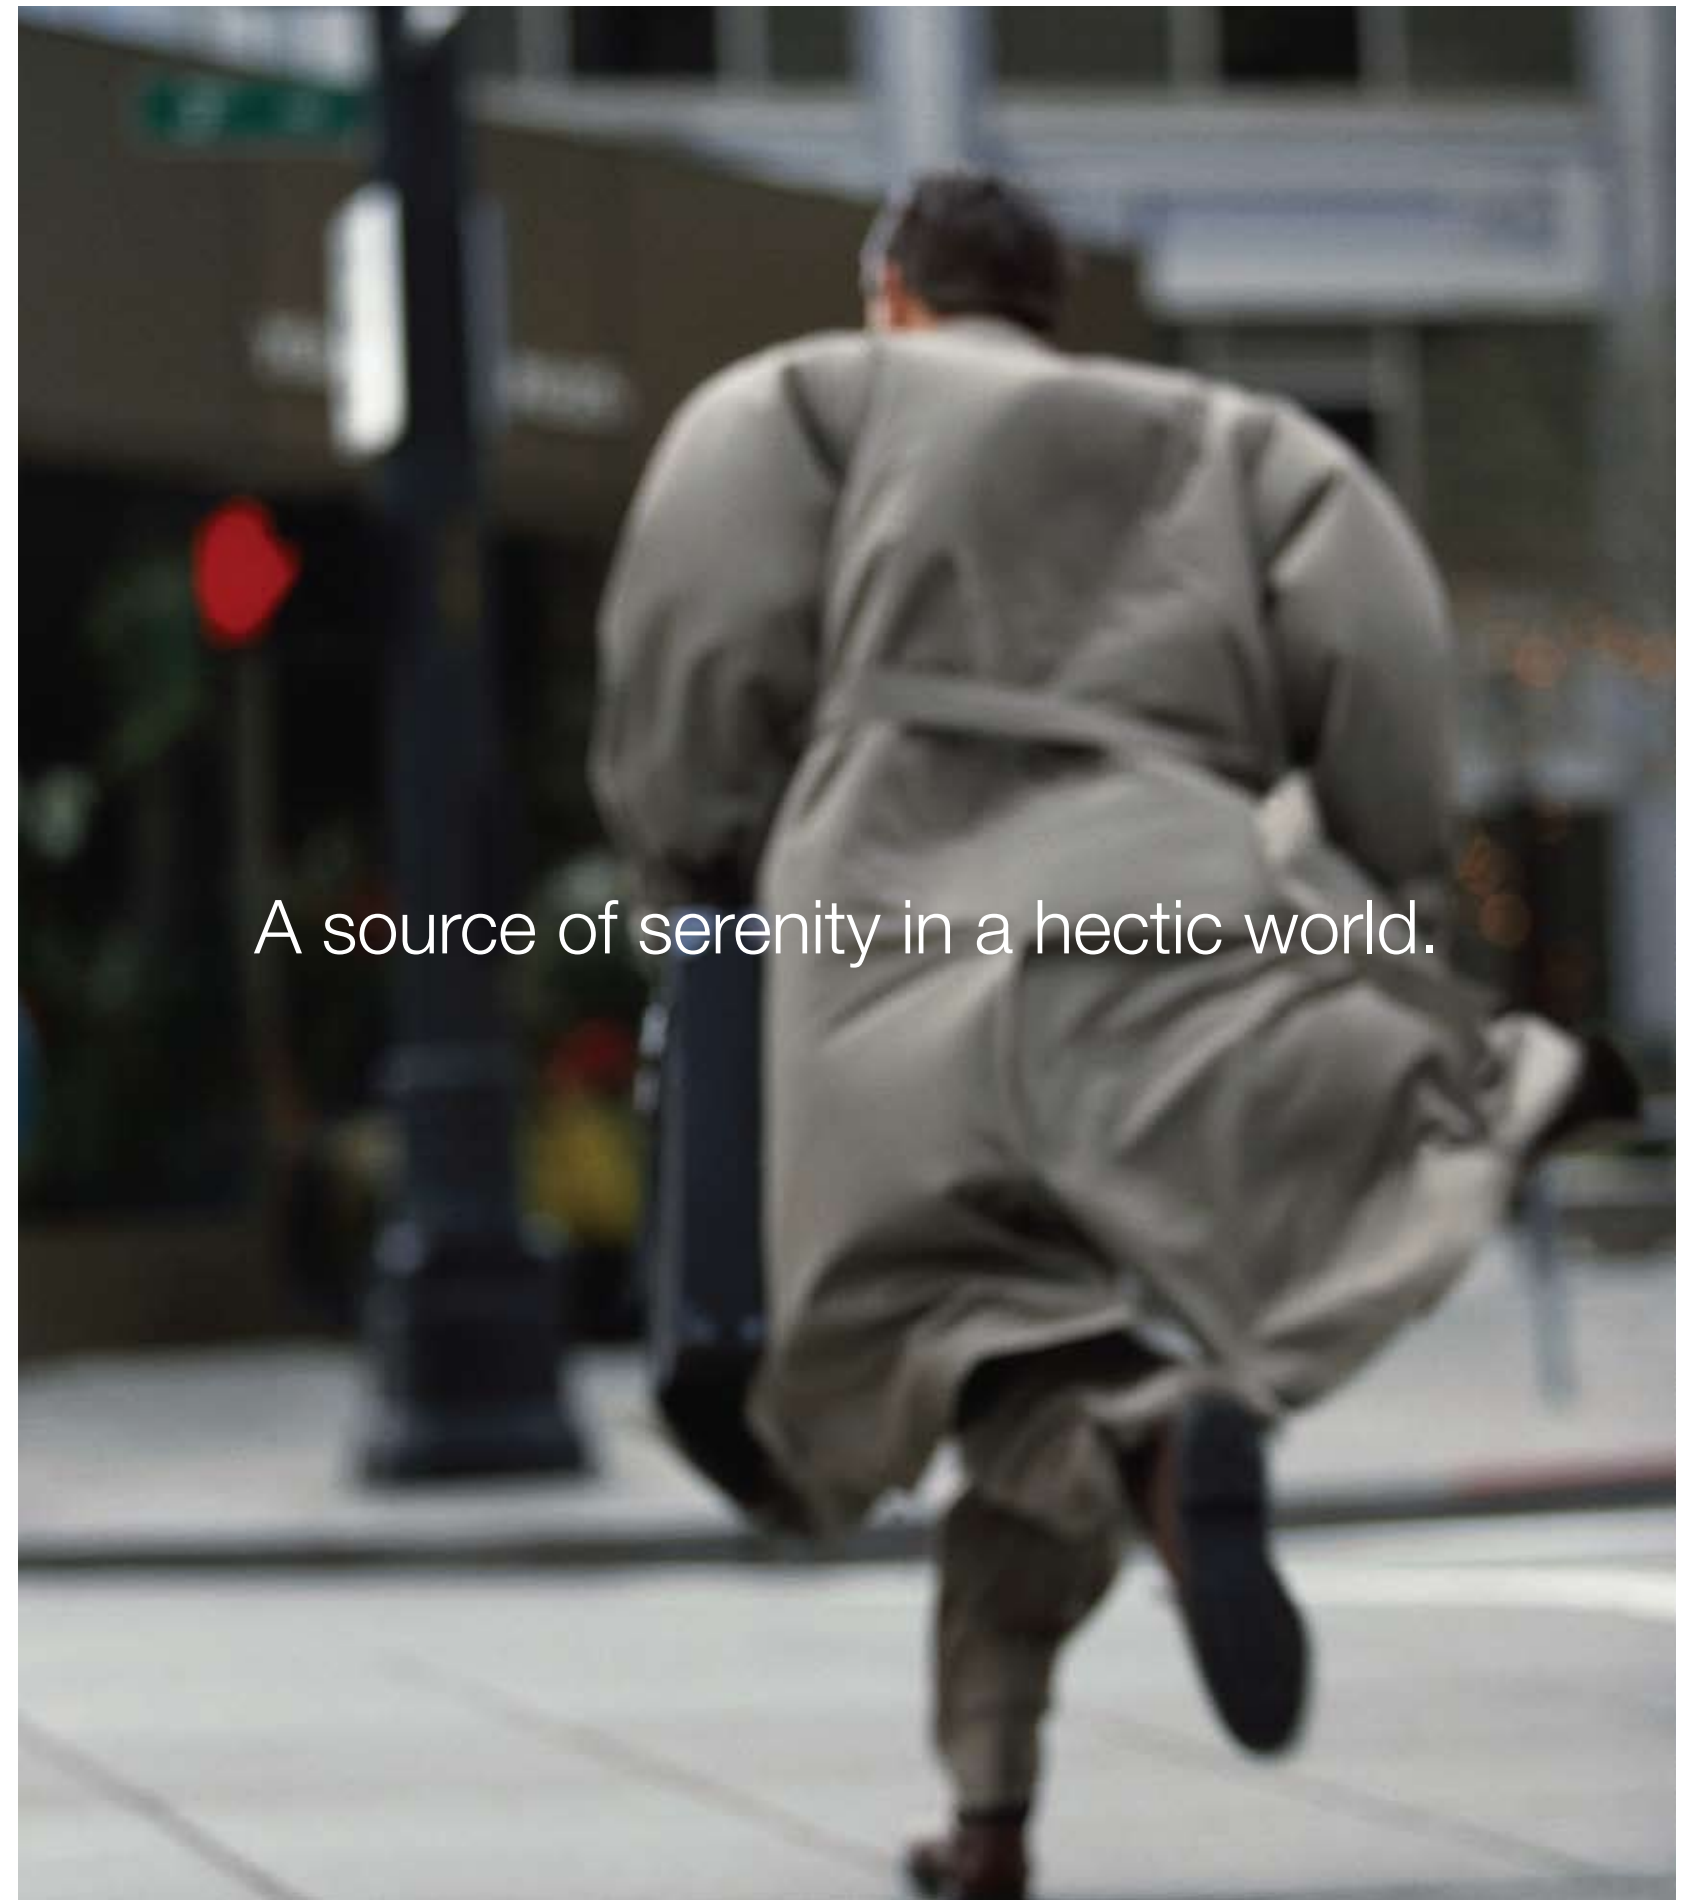

Quality wood furniture is part nature and part nurture.

We have something in common.

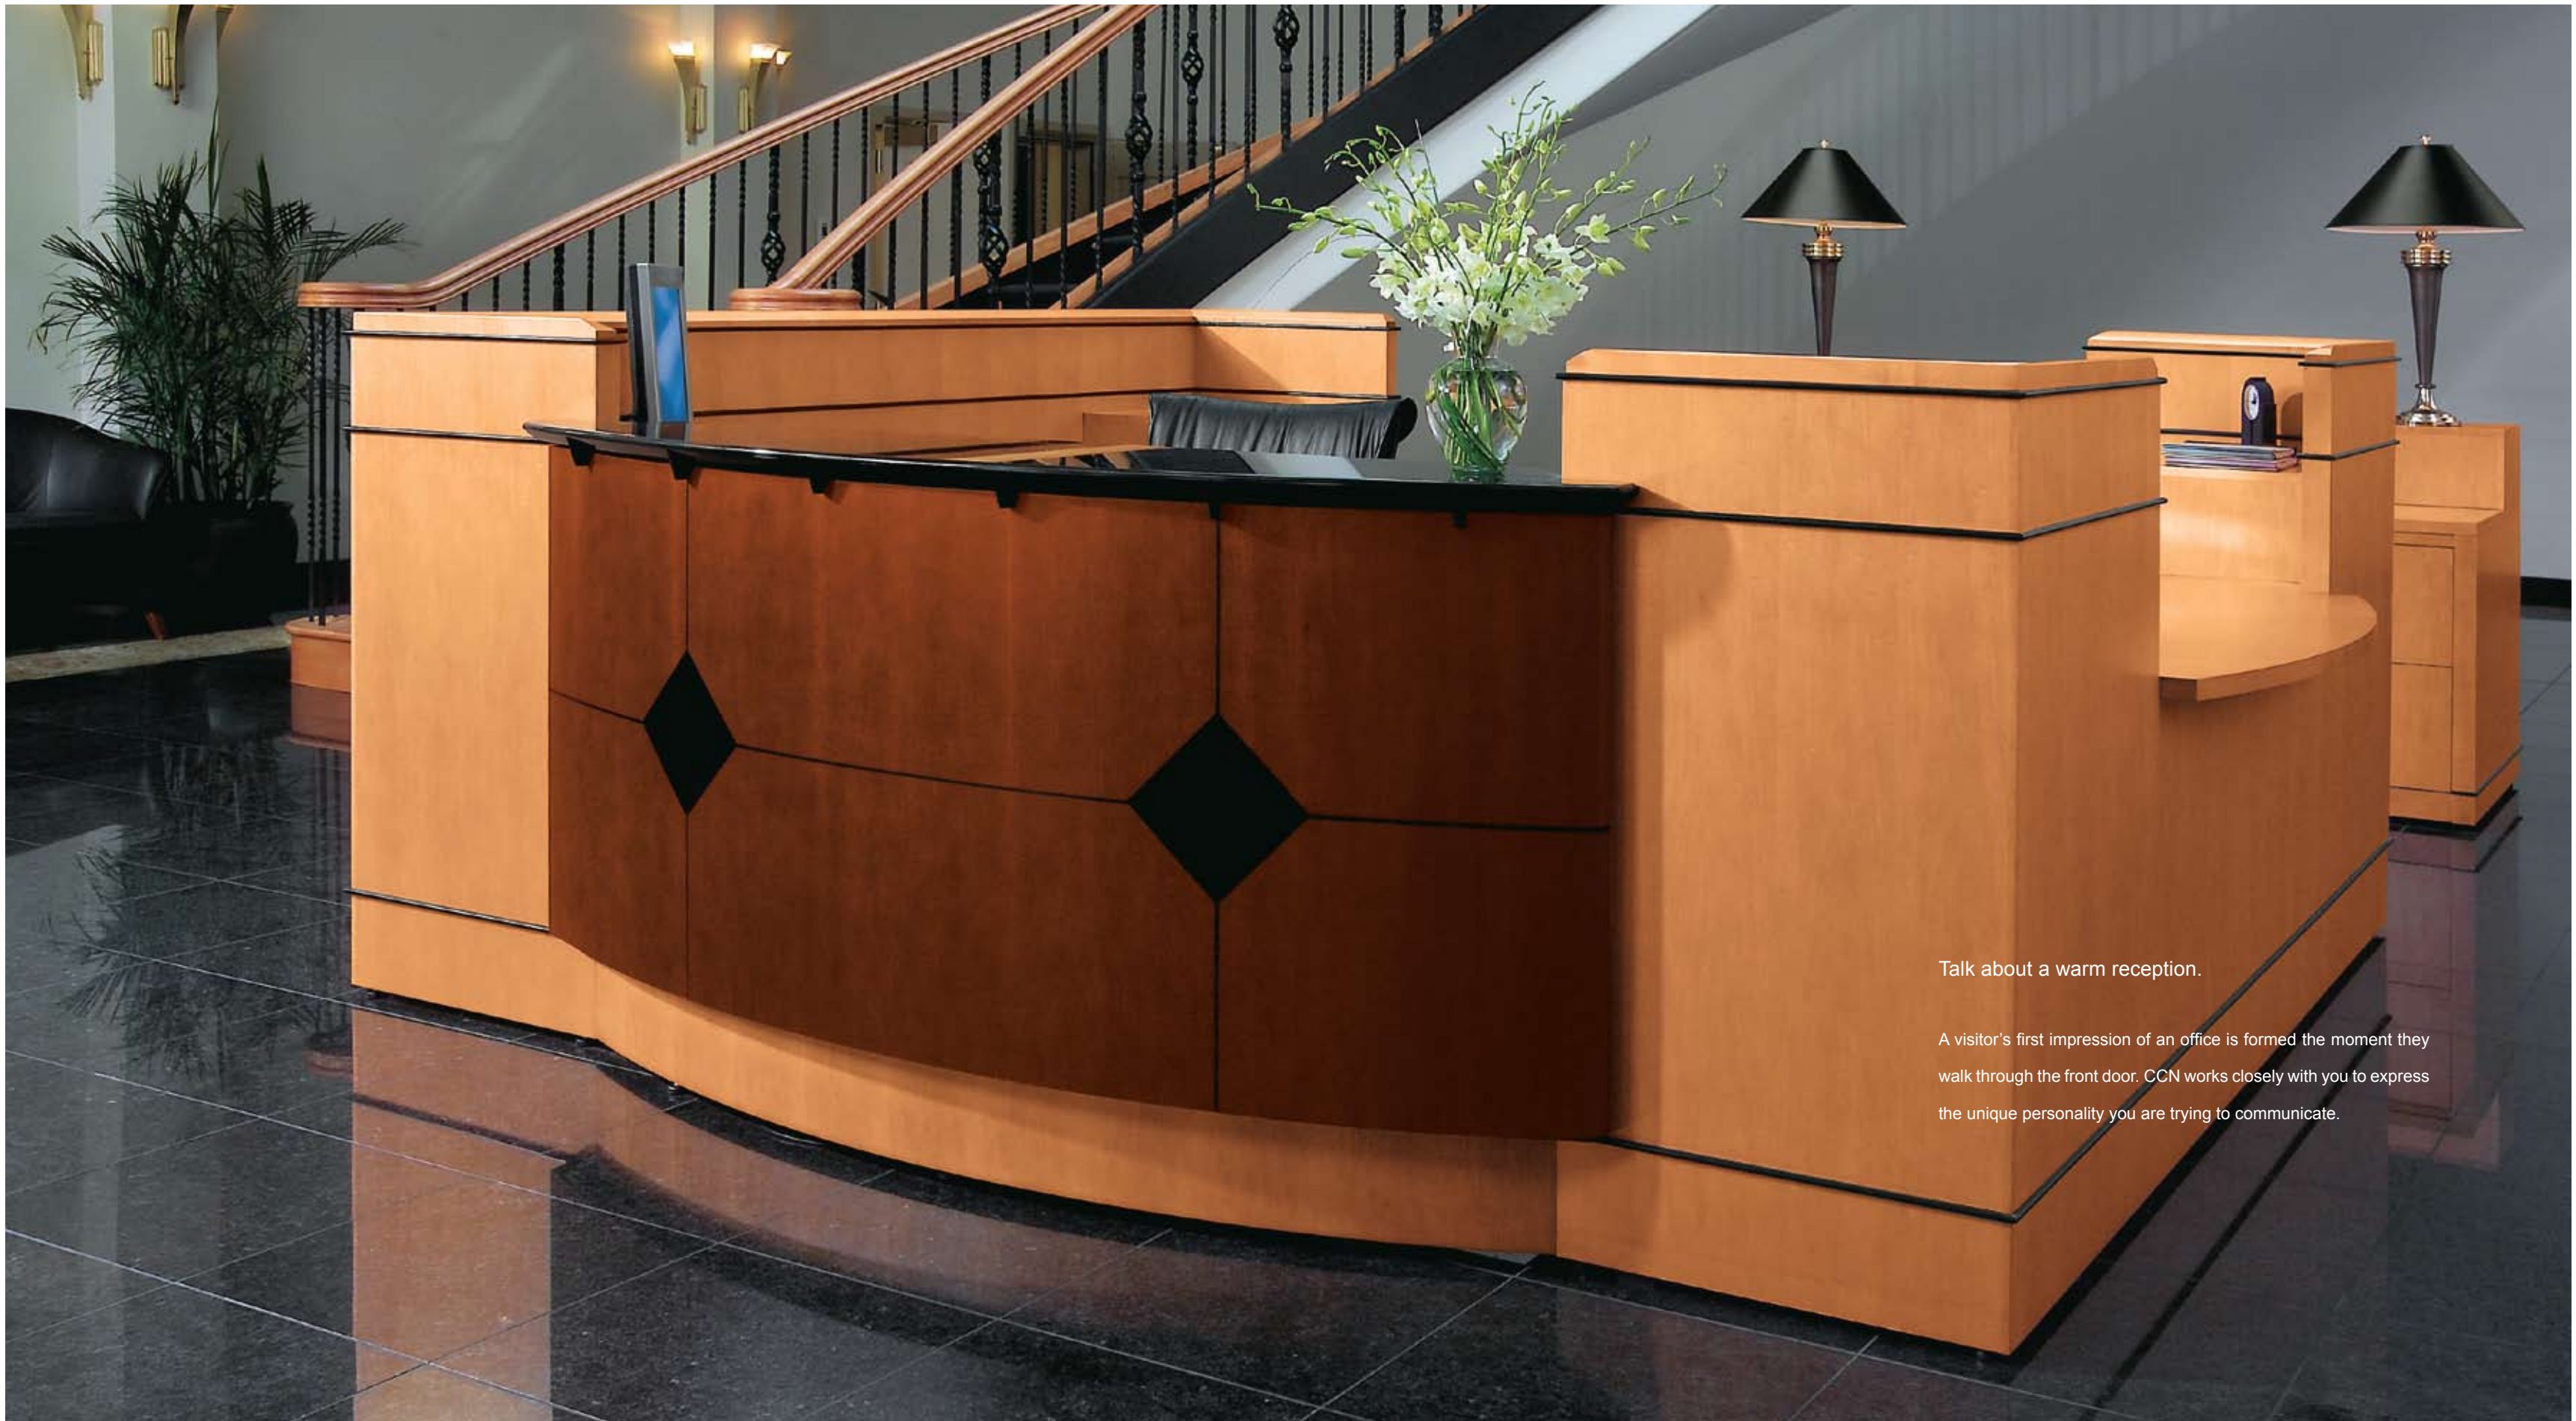

A shared appreciation for the beauty and warmth that only wood affords. The intimacy of wood furniture has a unique ability to soften the harshness of the business world. Understanding the aesthetics and performance of all species of wood has enabled CCN to craft impeccable office furniture for more than 20 years. And we are as meticulous about service as we are about choosing raw materials. We collaborate with you to plan and design an office that makes the smartest possible use of nature's rich resources.

While many manmade materials have gained popularity over the years, none offers the intimacy of wood. For instance, the impersonal metals used by many furniture makers require little craftsmanship, whereas working with wood demands an ability to react to the subtle nuances of the material. At CCN, we have a proven process for tapping into the best way to use the richness of wood to make your piece of furniture communicate exactly what you want it to. And we take the time to really understand the workspace you are designing, so that the furniture can help bring it to life.

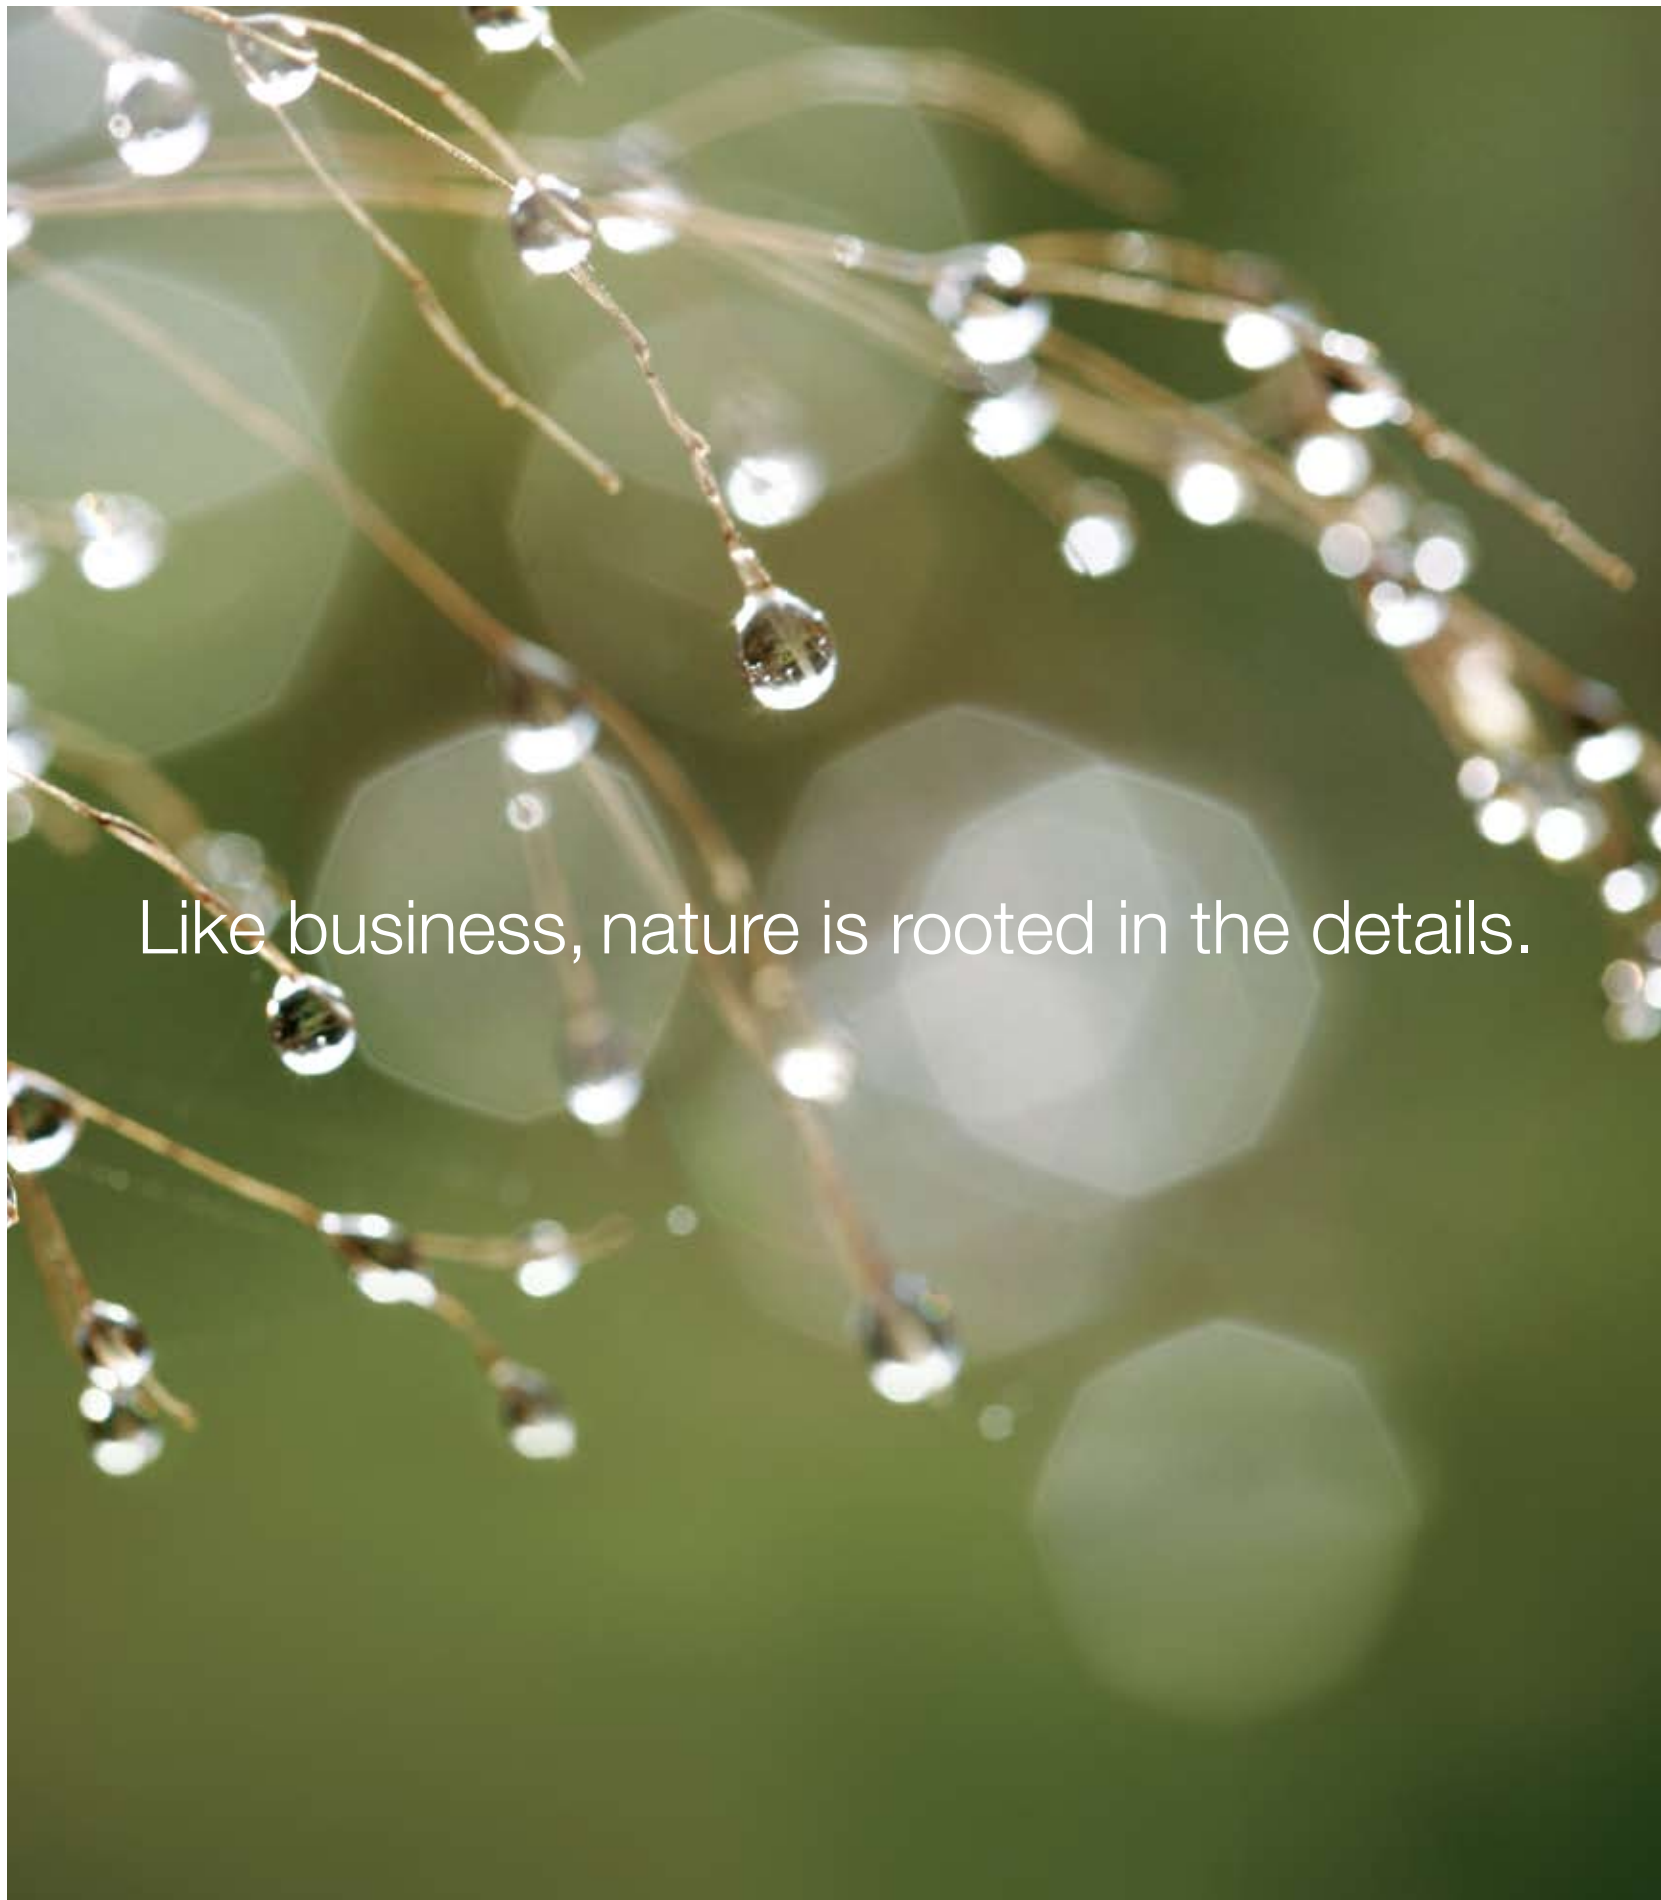

A source of serenity in a hectic world.

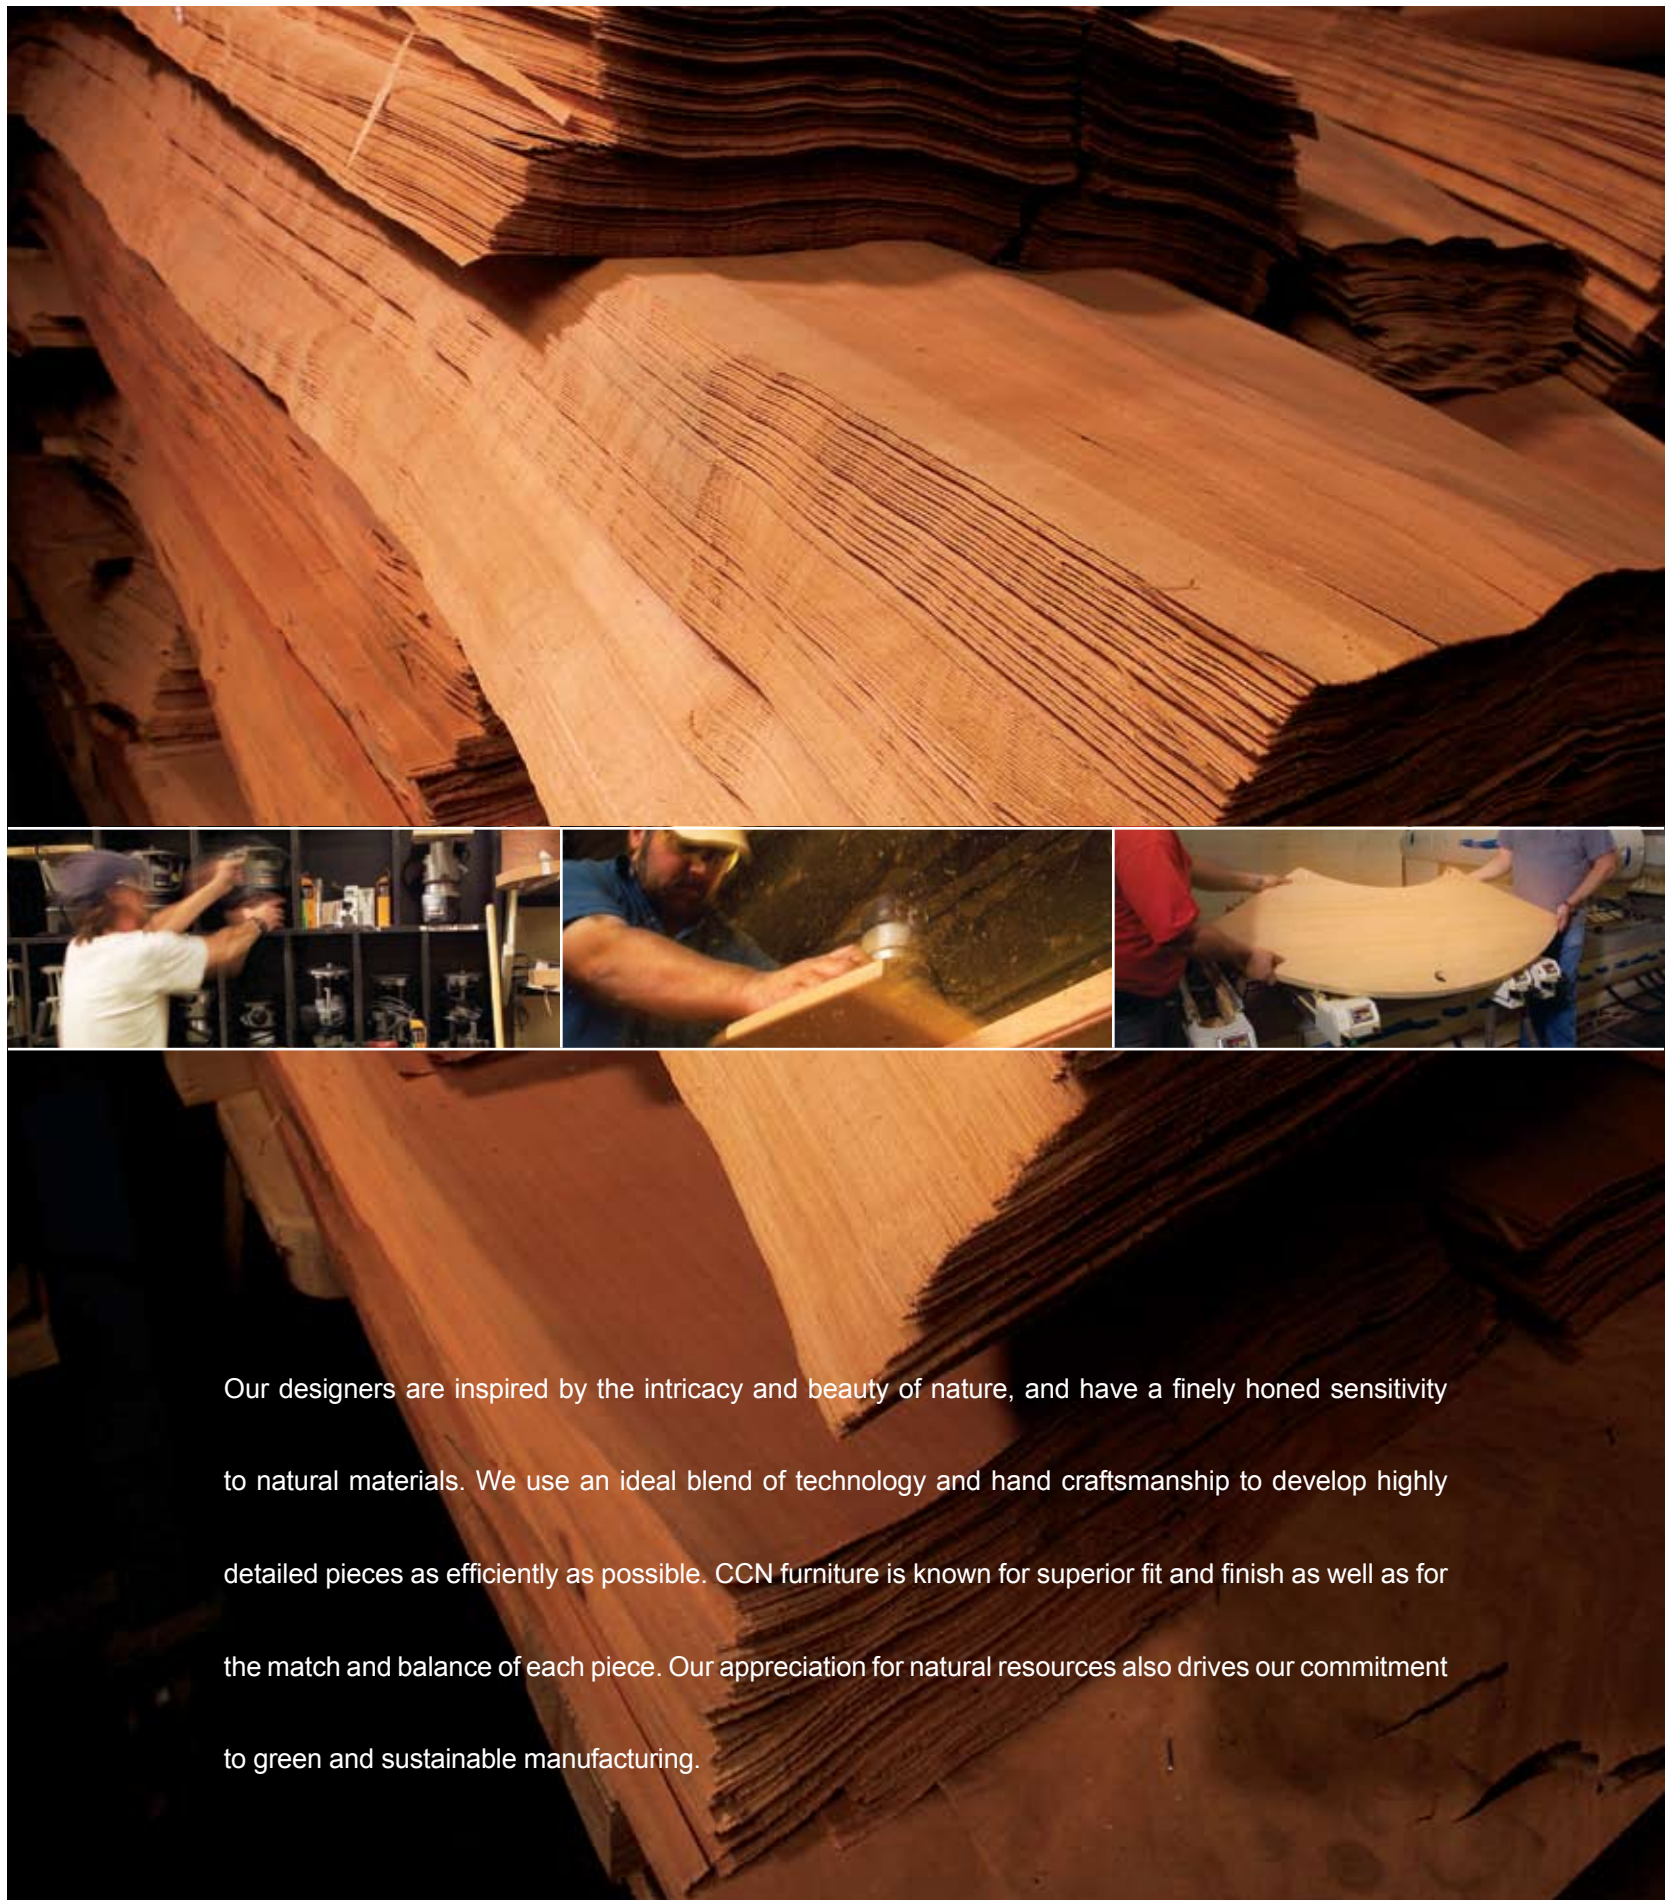

Talk about a warm reception.

A visitor's first impression of an office is formed the moment they walk through the front door. CCN works closely with you to express the unique personality you are trying to communicate.

Like business, nature is rooted in the details.

Our designers are inspired by the intricacy and beauty of nature, and have a finely honed sensitivity to natural materials. We use an ideal blend of technology and hand craftsmanship to develop highly detailed pieces as efficiently as possible. CCN furniture is known for superior fit and finish as well as for the match and balance of each piece. Our appreciation for natural resources also drives our commitment to green and sustainable manufacturing.

CCN offers preconfigured furniture lines to accommodate smaller room sizes for mid-management offices. We can help simplify planning and specifying by offering solutions with exceptional flexibility, optimal use of space, and practical pricing. These efficient options also maximize storage, provide easy expansion to executive offices or gallery workstations, and feature convenient technology interfaces and innovative ergonomics.

The atmosphere of a conference room sets the tone for how a company wants to be perceived, both internally and by customers. CCN will help you balance beauty, comfort and functionality.

From one delicately balanced environment into another.

CCN is a fully equipped furniture manufacturer. At our production facility in upstate New York, we have all the resources to transform a piece of wood into a piece of furniture. Through our vertically integrated process, we are able to make parts to order, rather than purchasing sub-assemblies. You will also find that CCN has perfected the precise integration of human skill and advanced technology. Our philosophy is that the right people using the right equipment adds up to superior furniture.

# The product of a shared appreciation.

Together, the philosophy, experience, materials and equipment we've described result in the piece of furniture you envisioned for your office. Something you truly connect with and feel a part of. As well you should. After all, you are integral to the entire process. CCN's many well respected furniture lines offer a look and style for everyone. And, we have the flexibility to provide customized, standard or modified product and to offer size variations, specialized storage, specialty veneers, custom finish match, and accommodation for equipment and cabling. So your furniture is as functional as it is breathtaking.

A SHARED APPRECIATION
